

Stop Presuming... Electronically Record Blood Unit Disposition at the Nursing Station

- Ensures **traceability** and **accurate billing** by enabling nurses to record transfusion status:
 - Transfused
 - Aborted
 - Spiked
 - Destroyed
 - Other (configurable)
- Verifies transportation time by recording blood unit as “arrived” at the nursing station.
- Records blood unit locations, patient and caregiver names (ideal for hospitals with pneumatic tube systems).
- Updates disposition status in blood bank information system automatically.
- Generates reports of “missing” blood units.

Saves Money

- Eliminates time-consuming and low compliance paper-based systems.
- Reduces training burden with simple and easy-to-use operation.
- Does not require expensive equipment.
- Accessible from any computer in the hospital via web-browser.
- Turn-key system that can be upgraded to include refrigerator monitoring and bedside verification.

Compatible with

- Any blood unit numbering system (including ISBT).
- All blood product types.

Includes

- AutoFate nursing station software (web-based or desktop).
- AutoFate enterprise software (Manager, Database, Services).
- Barcode scanners.
- Implementation, Validation and Training.
- Interfaced and Non-interfaced options available.

Improve traceability now with simple and easy-to-use software
